Tagline

Visualizing the associations between weather and multiple sclerosis at your fingertips with the use of a mobile site.

Approach

There have been multiple studies done showing that the weather has major effects on the severity of multiple sclerosis patients. Being able to monitor your previous and present symptoms in relation to the temperature in your area becomes detrimental to understanding how climate affects each individual patient. The implementation of a mobile site that allows for a graphical representation of the climate of the patients current geographical position in relation to previous symptom information, which was inputted into the Bamboo Health app, will help provide vital information to the patient. This site allows for this very important information to be quickly displayed in the palm of your hand anytime, anywhere.

Early Prototypes

Grading Milestones

Deliverable	Description	Due Date	Credit
Meet Sponsor	Explain expectations of project	03-31-14	5
Project Proposal	Detailed Description of intentions with project	04-04-14	15
Iteration 1	Design, Basic Working Implementation	04-16-14	25
Iteration 2	Complete Implementation, Error checking,	04-24-14	45
Final Project Presentation	Present what we have to the class and to our sponsor	04-28-14	15
		Total :	105
